Osprey Raptor 14 Hydration Pack

Osprey Packs started building hiking packs from humble beginnings in 1974, and they've been developing innovative products ever since. Case in point: the new Raptor series packs have been under development for nearly three years.

As you would expect, the Raptor 14, with 14 liters of storage, has a lot of really well-thought-out features, designed both for cargo-hauling functionality and rider comfort.

I found the 14L pack to be just about perfect for long days in the saddle. I was able to comfortably carry 3L of water, ample food, tools, a rain jacket, and a DSLR camera with two lenses in the Raptor—plenty of storage for an epic day in good weather. If I was buying, I'd strongly consider the 18L bag for the added storage and flexibility when bulkier clothing for cool and/or wet weather might be involved. Made in Vietnam. www.ospreypacks.com —Justin Steiner
